This Offer Good Only Until September 30, 1962

REMEMBER - DEDUCT 1/2 FROM THESE PRICES

- Angraecum giryamae: Named from the Giryama tribe who inhabit the coastal strip north of Mombasa in East Africa. Plant resembles some of the Vandas, having large fleshy leaves and large beautiful fleshy flowers. Each flower stem carries 6 or more 7" blooms, the sepals and petals being pale green, the lip pure glistening white. Plant remains in bloom several weeks. Fragrant. (These are large plants and should be removed from pots for shipping) \$20.00
- Brassavola nodosa: Very narrow bulbs and a single rounded leaf, the whole being about 8 to 12 inches in height. Sepals and petals narrow and pointed, greenish white in color. Lip is white, rounded in shape. These are available in pots or on wire. Fall 4.50
- Brassavola Perrinii: Very minute pseudobulbs with terete coriaceous leaves about 9" long. Flowers are medium sized, sepals and petals greenish white, lip pure white. Summer 8.50
- Cattleya Bowringiana: Pseudobulbs about 12" high, swollen at the base and leaves about 4" long. Whole plant is olive green color. Spikes have up to 20 flowers about 2" in size. Rose purple overall with much darker purple color on front lobe of the lip. Throat is lighter. Fall 8.50
- Cattleya Forbesii: Pseudobulbs cylindrical, about 10" high, with two leaves. Spikes carry up to 5 flowers about 3" in size. Sepals and petals are greenish, lip green, streaked with red on the inside of the side lobes, on a whitish ground. Spring and summer 8.50
- Cattleya skinneri: Pseudobulbs about 12" tall with leaves about 4" long. Spikes carry 5 or more rose purple blooms about 3" in size. Lip is darker than sepals and petals and the throat is quite light. Spring 8.50
- Cattleya violacea: Plant is about 12" high. Pseudobulbs narrowed at both ends, with 2 leaves. Spikes bear 3 or more flowers. Sepals and petals are deep rose and lip is rich crimson. Summer 12.50
- Hybrid Cattleya Mlle. Louise Pauwels: A late winter and spring blooming pure white Cattleya. Divisions with new growths in sheath. 12.50
- Cynoches chlorochilon: Well known Swan Orchid. Pseudobulbs about 6" tall with long yellowish green leaves. Blooms are produced in pendulous sprays from near the top of the bulb. 8.50
- Cymbidium Cygnus: Pure white flowers. Three and four bulb plants. Winter 10.00
- Cypripedium insigne Harefield Hall type: Green leaved, and bearing single blooms of fair size. Dorsal sepal is yellowish heavily spotted with chocolate, margined with pure white. Pouch and petals yellowish green, veined dark green and suffused with brown. Winter 7.50
- Cypripedium niveum (True Type): Mottled leaf dwarf with strap-shaped foliage. Tall scapes bear 1 or 2 satiny white flowers, rather round in shape and dotted with purple at the base of the upper sepal and petals. Summer 15.00
- Cypripedium niveum var. Ang Thong: Another charming dwarf plant similar to above. Blooms are pure white with small red dots in a nice pattern. Dorsal sepal smaller than the petals. Various 8.50
- Cypripedium venustum: Another mottled leaf variety, deep purple on the underside of the foliage. Dorsal sepal greenish white with purple stripes. Petals are warted with purple, purple tipped, lip yellowish, veined with green and rose flushed. Winter 7.50

- Cypripedium villosum*: A green leaved species with large, glossy flowers. Dorsal sepal brown to green narrowly margined with white. The upper half of the petals is yellow brown, the lower half paler. Lip is brownish yellow. Winter and spring. \$ 7.50
- Dendrobium Chrysotoxum*: Pseudobulbs 6 or more inches high, stout, club shaped. Flowers in apical lateral spikes, 7 or more on each. Blooms are about 2" in size. Rich golden yellow, lip with deeper orange disc. Often blooms from old as well as new bulbs. Requires a rest. Spring 10.00
- Dendrobium thyrsiflorum*: Pseudobulbs about 15" high. The flowers are carried in long drooping thyrses each about 1 1/2 to 2" in size. Sepals and petals white, sometimes pink flushed, lip golden orange. Spring 8.50
- Epidendrum atropurpureum*: Pseudobulbs about 2" in height with two leaves about 12" long. Flowers are about 3" in size, usually 5 or more on a spike. Sepals and petals green with chocolate brown markings. Lip is pure white with a light crimson blotch. Early Summer 8.50
- Gomeza crispa*: Plant resembles *Oncidium*s in appearance. Sprays of small greenish white, fragrant blooms are borne from the axil of the leaves. Spring and Summer 8.50
- Laelia Muelleri*: Similar in appearance to *L. cinnabarina*, but flowers are reddish. Spring 8.50
- Laelia pumila* var. *praestans*: Similar to *L. pumila* but the lip is trumpet shaped, red purple in color shaded with yellow, ridges barely shown. Fall 8.50
- Lycaste aromatica*: Flowers are golden yellow, lip spotted with orange. Very fragrant. A well grown plant will produce many blooms from a flowering bulb. Winter 8.50
- Lycaste cruenta*: Similar in habit to *aromatica* but the flower is large and not produced in such quantities. Bright yellow with basal blotch. Spring 8.50
- Lycaste Deppei*: About 12" in height and bearing large flowers. Sepals and petals are pale green, flushed or spotted with red. Petals are pure white, lip bright yellow and spotted with red. Side lobes of lip are white, marked with red. An unusual and interesting species. Winter 10.00
- Lycaste lasioglossa*: Height about 12" with somewhat tapered pseudobulbs. Sepals are 2 to 3", rather narrow greenish externally, deep reddish brown on inner surfaces. Petals and lip are yellow, the lip tongue-like and covered with wooly hairs. Very unusual. Winter and Spring 12.00
- Lycaste Mitchelli*: Plant is similar to *L. aromatica* but the flowers are larger and the plant produces more flowers. 7.50
- Lycaste skinneri*: Flowers large and handsome, variable sepals are white, somewhat suffused with rose. Petals usually are more rose colored. Lip is whitish, thickly spotted with crimson. Winter 8.50
- Miltonia Regnelli*: Height is about 12", scapes nearly as tall, carry up to 5 flowers. Flowers are about 3" in size. Sepals and petals are white, sometimes rose flushed at the base. Lip is rose colored, margined with white, streaked with rose purple. Crest is yellow. Fall 7.00
- Miltonia spectabilis* var. *Moreliana*: Pseudobulbs flat oval, carried at intervals on a creeping rhizome. Usually single flowered, flat, large, a deep rich purple color. The lip veined with rose. Fall 10.00
- Miltonia Regnelli* x *Miltonia spectabilis* var. *Moreliana*: These are just coming into bloom for the first time. 8.50
- Mormodes atro-purpurea*: Pseudobulbs short, heavy leaves about 9" tall; short, erect scapes bear 2" flowers of dark reddish-brown. Lip is velvet-like, deep reddish crimson covered with short hairs. Spring. Rare 5.00
- Notylia zypophorus*: Lovely miniature with short pointed leaves, somewhat fan-shaped and producing quantities of small purple blooms forming a ball shape. Summer 4.50
- Odontoglossum chiriquensis*: Similar in habit to *Odontoglossum grande*, but the flowers are a little smaller and the plant blooms in late spring or summer. Scarce and limited. 9.50

- Odontoglossum cordatum*: Flatly oval pseudobulbs are about 3" tall and leaves about 6" tall. Erect scapes are several flowered, sometimes branched. Flowers are large, sepals and petals narrow, pointed, chestnut-brown, tipped and marked at the base with yellow. Petals are shorter and broader, pale yellow, spotted and blotched with red-brown. Lip is heart-shaped, pointed, white, spotted with brown. Spring \$ 7.50
- Odontoglossum grande*: Pseudobulbs about 4" in height with leaves about 8", all a dull green color of quite heavy texture. Upright scapes carry 4 or more large, beautifully marked flowers. Sepals are bright yellow. Lip is short, nearly round, whitish or pale yellow, sparsely blotched with red-brown. A very waxy, bright flower. Fall 8.50
- Odontoglossum grande* of bajio: More compact plant than the type, and it flowers in October. 8.50
- Odontoglossum maculatum*: Flatly oval pseudobulbs about 3" high and leaves about 6" long. Flowers are about 2" in size with dark brown sepals and petals, topped and marked basally with yellow. Petals are yellow spotted on their basal halves with brown. Pointed. Spring 7.50
- Oncidium ampliatum* var. *majus* (The Turtle Orchid): So-called because the pseudobulbs are flattish and wrinkled. Long, arching, branched spikes produce quantities of bright yellow blooms of good size. Spring 8.50
- Oncidium Cavendishianum*: Large, fleshy pointed leaves about 10" or more in size, dark green in color. Scapes are 2' or more long, branches at the tips. Flowers are fragrant about 2" in size. Sepals and petals undulated, yellow spotted with red. Lip is bright yellow. Spring 7.50
- Oncidium Jonesianum*: Very small pseudobulbs, round and with terete leaves tapering at the ends. Scapes are drooping and carry 12 or more flowers about 2" in size. Sepals and petals are white shaded with yellow and spotted with chestnut brown. Lip is broad, white and sparsely spotted with red. These are becoming scarce. Fall 10.00
- Oncidium lanceanum*: Without pseudobulbs and leaves about a foot long, light green spotted with purplish-red. Scapes are about 18" tall and carry several large fragrant blooms. Sepals and petals are yellow, shaded with green and spotted with chocolate-brown. Lip is rose-purple, darker at the base. Summer 9.50
- Oncidium luridum*: A bulbless plant with large thick upright leaves about 12" tall, dull green and spotted. A tall slender spike bears large olive-green flowers with brown blotches nearly covering the surface of the blooms. Summer 7.50
- Oncidium macranthum*: One of the most magnificent of the *Oncidiums*. Pseudobulbs about 4" high with dark green leaves about 15" high. Scapes are long, branches and many flowered. Flowers are 3" in size, fleshy. The upper sepal is yellow, shaded with olive-brown, the two lower petals shaded with orange-yellow. Petals are bright yellow. Lip is white, bordered with violet-purple. Spring and Summer 8.50
- Oncidium Marshallianum*: Pseudobulbs about 5" high with leaves about 12" long. Scapes are 3' or more in height, branched. Flowers very large and variable. Sepals are yellow, centrally spotted with red brown. Lip is large, spreading, a very bright yellow, the base and crest spotted with orange-red. A very beautiful flower. Early summer 10.00
- Oncidium onustum*: Dwarf species with small round bulbs and leaves about the same height. Long arched scapes carry quite large bright yellow blooms. Fall 6.50
- Oncidium ornithorynchum*: Pseudobulbs are oval-oblong about 4" in height with leaves about 12" long. Scapes are arching, branched about 12 to 15" long with many flowers. Flowers are very fragrant, about an inch in size of soft rose-lilac color. The lateral lobes of the lip are usually darker than the remainder of the flower. Crest is yellow. Winter and various 7.50
- Oncidium phymatochilum*: Pseudobulbs about 4" high and flattish. Leaves about 10" long, broad. Scapes bear many flowers about 2" in size. Sepals and petals narrow, pointed, pale yellow or creamy white, spotted and banded with brown or red. Lip is white spotted with red around the crest. Summer 9.50
- Oncidium Powellii*: Pseudobulbs flattish, about 4 to 5" tall with leaves about 8" long. Sprays of lovely large dark brown flowers. Winter 9.50
- Oncidium splendidum*: Pseudobulbs about 4" high with a stiff, fleshy, leathery leaf about 12" long. Erect scapes are branched, about 2' in height. Flowers are large, sepals and petals yellowish-green, barred and blotched with rich brown, recurved at the tips. Lip is large, flat, clear yellow. Mid-Winter 8.50

Oncidium varicosum var. Rogersii: Pseudobulbs oval-oblong, furrowed about 4" high. Leaves about 8" high. Scapes are about 2 to 3' long, branched, and carry many flowers. Sepals and petals are yellow, barred with red-brown. Lip is large, spreading, bright yellow. Winter	\$ 8.50
Oncidium Wentworthianum: Pseudobulbs about 4" high and marked with brown leaves about 10" long. Slender scapes are branched and carry many 1" size blooms. Sepals and petals yellow blotched with red-brown quite yellow at the tips. Lip yellow, spotted with red-brown. Summer	7.50
Phalaenopsis Cornu-cervi: Small yellow blooms barred with brown on short stems. Summer and various	10.00
Phalaenopsis Esmeralda: Leaves about 6" long, rounded purplish underneath. Scapes erect, slender with many flowers. Blooms are about 1" in size, variable in color. Sepals and petals light or dark amethyst, lip three-lobed, deep purple. Summer	7.50
Phalaenopsis Leuddemanniana-Heirolifica: Shiny green leaves and dark purple small flowers barred with creamy white. Winter	12.50
Phalaenopsis Leuddemanniana var. Pulchra: Similar to Heirolifica but darker in color and larger. Various	12.50
Pleurothallis yucanensis: The plant was collected in the ruins of the temple at Tykal in Guatemala. Very narrow pseudobulbs about 3" in height with a single fleshy leaf. Small yellow flowers. Various	8.50
Rodriguezia secunda: Pseudobulbs small, compressed. Leaves are narrow. Flowers are large in proportion to the plant. Arching scapes carry numerous rose-pink flowers whose lip is darker shade. Fall	4.50

REMEMBER - DEDUCT 1 / 2 FROM THESE PRICES

- Ophrys sphegodes* L. (Common Spheg Orchid). Plants oval pseudobulbs are about 3" tall and leaves about 5" long. Petal sepals are several flowered, somewhat branched. Flowers are large, sepals and petals narrow, pointed, yellowish-brown, tipped and marked at the base with yellow. Petals are shorter and broader, pale yellow, spotted and blotched with red-brown. Lip is heart-shaped, pointed, white, spotted and blotched with brown. Spring.
- Ophrys sphegodes* L. (Common Spheg Orchid). Plants oval pseudobulbs about 4" in height with leaves about 5", all a dark green color of quite heavy texture. Bright sepals are 4 or more large, somewhat marked flowers. Sepals are bright yellow. Lip is short, nearly round, whitish or pale yellow, sparsely blotched with red-brown. A very waxy, bright flower. Fall.
- Ophrys sphegodes* L. (Common Spheg Orchid). More compact plant than the type, and it flowers in October.
- Ophrys sphegodes* L. (Common Spheg Orchid). Plants oval pseudobulbs about 7" high and leaves about 5" long. Flowers are about 1" in size with dark brown sepals and petals, tipped and marked with yellow. Petals are yellow spotted on their basal halves with brown. Pointed. Spring.
- Ophrys sphegodes* L. (Common Spheg Orchid). 50-called because the pseudobulbs are blotted and wrinkled, large, arching, branched spikes produce quantities of bright yellow flowers of good size. Spring.
- Ophrys sphegodes* L. (Common Spheg Orchid). Large, fleshy pointed leaves about 10" or more in size, dark green in color. Sepals are 4 or more large, branched at the tip. Flowers are bright about 5" in size. Sepals and petals undivided, yellow spotted with red. Lip is bright yellow. Spring.
- Ophrys sphegodes* L. (Common Spheg Orchid). Very small pseudobulbs, round and with 10 or 12 leaves tapering at the ends. Sepals are drooping, the variety is or more flowers about 5" in size. Sepals and petals are white shaded with yellow and spotted with chestnut brown. Lip is broad, white and sparsely spotted with red. These are becoming scarce. Fall.
- Ophrys sphegodes* L. (Common Spheg Orchid). Without pseudobulbs and leaves about a foot long, light green spotted with purplish-red. Sepals are about 15" tall and carry several large fragrant flowers. Sepals and petals are yellow, shaded with green and spotted with chocolate-brown. Lip is rose-purple, darker at the base. Summer.
